ABSTRACT

The main aim of the present study was conducted to investigate the of home environment with reference to resident area and family types among adolescent. The study was conducted on a simple random sample of 120 students studying in Ahmadabad city and ruler area of Ahmadabad districts in Gujarat. The home environment test constructed and validated by Karuna Shakar Mishra was used to collect the data. The result of the study reveals that there is a significant difference between the rural and urban adolescent in their home environment. There is no significant difference between the adolescents form joint family and nuclear family in their home environment.

Key words: - Home environment, adolescent, resident area, type of family
