Abstract

The present investigation in to find out the Social Adjustment of Secondary School Students in Relation to their urban and rural students boys and girls. The sample consisted of 120 secondary school students out of which 60 where boys and 60 where girls. For this purpose of investigation “Adjustment Inventory for school students” by A.K.P. Sinha and R.P. Sinhawas used. The obtained data were analyzed through ‘t’ test to know the mean difference between secondary school students in relation to their area urban and rural, boys and girls . The result shows that there is significant difference in social adjustment of urban & rural secondary school students at 0.05 level. It means urban area students are social adjustment better than rural area students. and there is significant difference in social adjustment of boys & girls secondary school students at 0.05 level. It means girls are social adjustment better than boys.
