### Abstract

The Indian age population is currently the second largest in the world. Ageing is a universal phenomenon. Some people achieve a sense of fulfillment and satisfaction in their old age, while others turn bitter and lament. Life satisfaction among the aged is an important concept, as it has far reaching implications and it can give us an overall view of the larger populations, factors affecting successful ageing are health status, marital status, socio-economic status and age. The paper discuss the various factors as marital status, socio-economic, age, gender and social support in affecting the quality of life and life satisfaction among the aged in Rajasthan.

**KeyWords:** *Life Satisfaction, Ageing, Quality Of Life, Anger and Aggression*
