Abstract

Aim of the research is to find out the emotional maturity among allopathic and homeopathic college students. so, the researcher made two groups- male and female. Each group contains 30 students. data was collected from different colleges. emotional maturity scale was used for data collection which was developed by Dr. Yashvir Singh and Dr. Mahesh bhargava from Agra. 2×2 factorial design which was used for data analysis of 't' test. the research conducted a survey of medical students with emotional maturity to learn about their experiences in 4th year of their college. results show that, there is a significant difference in their emotional maturity between allopathic and homeopathic college students. Allopathic college's student have more emotional maturity than homeopathic college's students. the girls have more emotional maturity than boys in allopathic group. boys and girls from homeopathic group have similar level of emotional maturity.
